Dear Makarand sir and team,

We value the partnership with Priyadharshini Group and the support extended to each other over the years. We have successfully engaged with Students/Faculty to create a mind share about TCS and help enhance the quality of emerging workforce.

TCS has been visiting the institute for many years and the quality of students hired has been good. The students have always impressed us with their enthusiasm, communication skills and professional demeanor. We have many students from the institute doing great work in TCS across locations and they have been actively participating in the contest platforms and their performance has been improving year on year.

I must mention that the vision, hard work and dedication of the teaching staff and management has been instrumental in shaping the overall development of the students. This foresight has helped the institute make a mark as one of the good institutes in the region.

The over emphasis on Academia Industry relations and the partnerships that the institute has had with multitude of organizations have helped shaping industry ready student community over the years.

Institute has also been supportive of TCS Academic Interface Program (AIP) initiatives which has been instrumental in TCS conducting

Respected Sir,

We are pleased to be associated with Priyadarshini Institute of Engineering and Technology, every year we get quality resources from your institute and we are amazed with the dedication of the students coming from you institute. There is no greater honor that supporting someones growth and evolution as an employer and we always take pride in doing so.

Below are the few points which we are allowed to shared with the colleges,  
They have the ability to identify problems of an engineering nature without direction.  
They have the ability to solve the problems they encounter without being told and shown how.  
They can develop new or unique approaches/solutions to engineering problems.  
They can develop cost effective solutions.  
They can develop potential new products.  
They can orally communicate engineering concepts on a formal basis.  
They behave ethically.  
They can work in culturally diverse groups.

We are very thankful to Prof. Mr. R.M. Pethe , TPO PIET for their support and guidance for placement drive.

Best regards  
Harish Charde

Dear Sir,

We are pleased to be associated with Priyadarshini Group of Colleges, every year we get quality resources from your institute and we are amazed with the dedication of the students coming from your institute. There is no greater honor than supporting someone's growth and evolution as an employer and we always take pride in doing so. Recently we had conducted survey for fresh hires in last 3years and asked managers to give their feedback which we later consolidated with HR Feedback who hired them. Below are the few pointers which we are allowed to share with the colleges, hope this will fulfill your cause.

- They appear prepared by the program for employment in the engineering profession by being well grounded in mathematics, engineering principles, design and development.
- They have the ability to identify problems of an engineering nature without direction.
- They have the ability to solve problems they encounter without being told or shown how.
- They take into account the "big picture" including perspectives of other disciplines when solving engineering problems.
- They have the ability to examine data, experimental or analytical, and determine a proper course of action or reach a proper conclusion.
- They take initiative to solve problems.
- They can develop new or unique approaches/solutions to engineering problems.
